Post Box

Lubna Alayeli, Giuseppe di Domenico, Borislav Schalev

We chose to draw a post box as our urban element.
One of the difficulties we had, was to achieve
the best resolution of the object.
We start making the photos with an Iphone, but the
resolution was too low so we had to use a
professional camera. We made 29 photos, taking all
the possible angles, moving from the bottom to
the top of the object.
We started making the contour from the right side
of the object, and then we revolved the curve of
360 degrees, so we got the basic shape of the box.
Then we started adding more details on the box to
make it look more realistic.
We didn't have any problems on shaping the form.
